Hi Greg,

Here is the constituent raw data set for H-North rebound study as of 11/6/2023. You should have all the hexavalent chromium data. Some of the aquifer tubes are missing metals because they got sampled mid-October and we haven't gotten the data back. I am working on the water level data set to get that to you as soon possible. We have a sampling event for 199-H4-84 that for routine gw modeling scheduled for October and I am trying to get the samplers to attempt sampling at this well again. We tried in Oct 17th but it was dry.

Thanks!
